DETAILED ACTION

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: clip 30 (page 4, line 11). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance. ✓
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Laird et al.

Laird et al teach (Fig. 4) an apparatus, including: sleeve guide 12a; and guidance ring 30a, where the mouth of a container is held in alignment with sample needles by the ring.

As to claim 1; element 30a is visible as a ring member, even though attached to a cylindrical body 50.

As to claims 2 and 3; the sleeve's interior guides the ring.

5. Claims 1-5 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Boyd.

Boyd teaches an apparatus, including (Fig., 4): shroud body (sleeve); and ring insert 174, where the mouth of the container is held in alignment with sample needles.

As to claim 1; the body would appear to serve as a guide, as it guides the ring.

As to claims 2 and 3; the sleeve's interior wall guides the ring.

As to claims 4 and 5; note tabs 180 that are attached to the insert 174 (in Figure 4), and that the guide must initially be slid into the sleeve.

6. Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
